

# Brand NEW Summer Workshops Just for Middle Schoolers!

## Fighting Crime with Forensics

Theft! Kidnapping! Murder! Discover how police and criminalists use science to collect and understand evidence at the scene of a crime. You'll have the chance to examine fingerprints, DNA, blood evidence, and lots of other clues as you solve a variety of crimes using the principles of forensic science. **June 17-19 8:30-noon (to 3pm on June 19).**

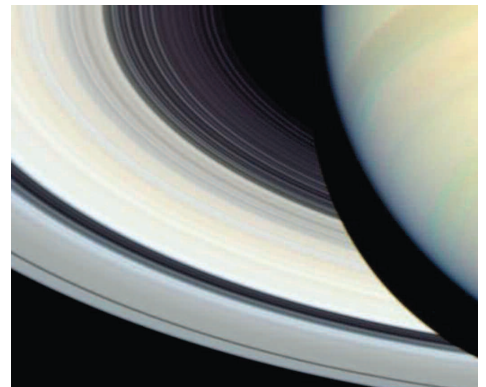

## EdGE Camp (Educating Girls about Engineering)

No Boys Allowed! This workshop is girls only, exploring the amazing possibilities in a career of engineering. You will investigate a variety of fields like mechanical, chemical, and environmental engineering . . . and you'll get to do a lot of inventing in the process! **July 8-10 8:30-noon (to 3pm on July 10).**

## Lost in Space

Here's your chance to leave Earth behind and find out what is waiting to be discovered in the final frontier. This workshop will explore both our closest neighbors and the farthest reaches of our known universe. We will investigate the latest discoveries in our solar system, what it is like to live in space, and what possibilities await us in outer space. **July 22-24 8:30-noon (to 3pm on July 24).**

## Slice & Dice

Ever wondered what an animal looks like on the inside? Well here is your chance to really check it out! This workshop lets you dissect six different specimens as you discover the similarities and differences that ecologists use to classify animals. We will examine the external and internal structures of such complex species as pigeons, sharks, and rats. And you and your scalpel get to do all the work! **August 5-7 8:30-noon.**

For students entering 6th, 7th, and 8th grade.
